## LARGE SPECIMEN TREES

### NURSERY GROWN - TRANSPLANTED

These trees are all grown far apart in nursery rows, having been frequently transplanted to insure a good root system and render them especially suited for future moving. The caliper measurement is taken at a point twelve inches above the ground.

The saving of time in planting such trees is so marked that scarcely any home owner can afford to plant the usual small tree which would require ten to twenty years to equal these in size.

The prices quoted below include moving and planting with a large ball of earth, but are subject to deviation, dependent upon conditions at point of planting, distance, etc.

## FRUIT TREES & SMALL FRUIT PLANTS

All of our fruit trees are carefully grown, true to name, healthy and well developed young trees. They are graded according to the Horticultural Standards of the American Association of Nurserymen. The caliper is taken two inches above the bud. Unless specially mentioned, the apple, plum, cherry, pear and quince trees are two years old, and the peach trees are one year old.

HARDY HERBACEOUS PERENNIALS  
AND ROCK GARDEN PLANTS

The color, ultimate height and principal season of bloom are given as an aid in arranging pleasing color combinations and in securing a succession of bloom throughout the season.

An asterisk (\*) indicates those varieties most suitable for rockeries.

Perennials should be planted whenever possible during their dormant season, which for most varieties is in the early Fall or early Spring. Peonies and Oriental Poppies have their dormant season during the latter part of August and early September, and should be planted at that time.

For the convenience of our customers we have most varieties of perennials available in pots. These can be planted safely after the plants start to grow.
